Preamble

The global flat steel industry is undergoing a profound transformation. Driven by evolving customer requirements, the transition toward low-carbon manufacturing, rapid adoption of Industry 4.0 technologies, and the growing demand for advanced high-strength steels, producers are reimagining every stage of the value chain—from hot and cold rolling to galvanizing and coating operations.

This conference brings together industry leaders, technology providers, steel producers, researchers, and manufacturing experts to explore innovations defining the next generation of rolling mills and downstream processing lines.

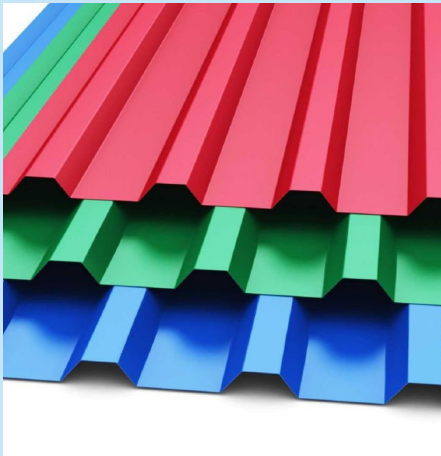

Participants will gain insights into cutting-edge developments in endless rolling, intelligent process automation, digital twins, artificial intelligence, advanced coating systems, hydrogen-ready technologies, and sustainable production practices that are reshaping the future of flat steel manufacturing.

Through technical presentations, case studies, and expert discussions, the conference will examine how modern rolling, galvanizing, and coating facilities are achieving higher productivity, superior quality, enhanced operational flexibility, and significant reductions in energy consumption and carbon emissions.

Special focus will be placed on emerging technologies supporting the production of advanced steels for automotive, construction, infrastructure, renewable energy, and electric vehicle applications.

As the industry advances toward smarter, greener, and more resilient manufacturing, this event provides a unique platform for knowledge sharing, collaboration, and strategic dialogue on the technologies and solutions that will define the steel plants of tomorrow.

Join us as we explore the innovations driving the next era of flat steel rolling, galvanizing, and coating excellence.
